WE ORGANIZE-U

At We Organize-U there is a difference between our cabinets and most garage cabinets found in the market. We understand that if our customers were satisfied with just some way to store items in their garage they have many choices and investing in custom cabinets would be at the bottom of the list.

We do not make cabinets for those looking just for storage or utility cabinets. Our cabinets are made for the discerning client that wants their items behind doors and a quality look and build with their home.

Our cabinets are made for the purpose they are intended for which is storing large and sometimes heavy items. This is why we make cabinets up to 48" wide and the adjustable shelving has corrugated aluminum stiffeners on the front and two inch wood stiffeners on the back. Our shelving have a slightly higher tensile strength than one inch shelving and are lighter which makes adjusting the shelves easier for the homeowner

Thermofused industrial grade melamine inside and out provides a strong durable finish that resists moisture and temperature change delamination like inferior cold rolled melamine applications which tend to bubble, twist and delaminate .

We use adjustable cabinets legs under our cabinets rather than cut corners with a inexpensive toe kick that are susceptible to moisture and creates an area for insects to escape pesticides.

Full backs along with dadoe joint construction screwed together creates the strongest cabinet possible for a lifetime of usability and function along with quality look for your home.

Quality Built In

Turn your dream garage...
into Reality
